If you would like to help out a friend with this information please let them download their own copy direct from [Lottery Syndicate World](http://LotterySyndicateWorld.com). Thank you.

Very Quick Introduction

I've been helping people win the lottery since 2002.

Which means I've seen it all.

And I mean every crazy crackpot lottery system!

Sadly it's still a very dangerous world out there.

There is an absolute ton of junk online, promoted as an amazing system to help you win the lottery.

Some is incredibly glossy and convincing looking.

Most is total garbage!

But those people will happily tell you **anything** to sell you their useless system. While they buy flash cars with the money they make selling systems – NOT from actually using them..!

So this ebook is a guide to help you filter out the useful from the useless.

Firstly, My No-B.S. Promise

If it works I say so. If it doesn't – I say so!

Some things are not quite so clear cut. Again, **I tell you where this is the case.** I'm NOT going to tell you something works when it has not been proven.

Welcome to the **No-B.S. Zone** :-)

Note: This guide is short and to the point. I'm not going to provide detailed explanations because most people don't want that – so if you want to discuss anything here in more detail, just [contact us here](#).

Right, let's get stuck in.

1. Hot & Cold Numbers

Any time you check the past results, some numbers will have been drawn more often than others (hot). Some much less than others (cold).

Does this help us? Not really.

Because what are we supposed to do with these numbers. Some say play hot numbers because they are 'in favour'.

But other 'experts' say avoid them because they have had their turn – so it's the cold ones you want..!

More on this kind of thing in a moment. But as a method for picking numbers, this ones busted.

2. Buying More Tickets

This is dull and obvious to many people, **BUT** I've also seen people get the maths VERY wrong.

We all know if you buy more tickets you get a better chance of winning, right?

But the maths on this is actually really simple. If you buy 2 tickets instead of 1, **you double your chances.**

If you buy 10 tickets instead of 1, that's **TEN TIMES** the chance. Simple as that.

I've had people argue with me over this, but it has been verified by people who teach maths (at University level!).

So even if you're not sure why, please just trust me on this one :-), buying more tickets does work.

Resources:

1. Confused About Lottery Maths..?

Read our [5 minute guide to understanding lottery odds](#) and your chances of winning. And don't worry, it's a lot easier than you might think

3. Get Rid Of Bad Combinations

People define 'bad combinations' in many ways. They also refer to those 'less likely to be drawn'.

They usually claim bad combinations are those that have **already** been drawn, or make certain patterns of numbers like 1, 2, 3, 4, 5, 6 or maybe 2, 4, 6, 8, 10, 12.

FACT: there is no such thing as a bad combination.

Those patterns are only patterns because we choose to label the balls with numbers.

We could label them with colours, or countries, or fruits! Then suddenly those patterns disappear. Would that make those combination more likely to appear if we did..?

Of course not.

The only reason we “don't see these unlikely results” come out, is because we haven't seen millions of results yet.

Because it will take **tens of thousands of years** for most of the combinations to get drawn even once. How long has your lottery been running..?

So don't believe the hype when it comes to getting rid of patterns. It will NOT increase your chances of winning.

4. What About Scratchers?

There are a few secrets here that nearly all scratch-off players have no idea about.

If you dig around your lottery companies website you should eventually find some very useful details about each

scratch game. You might have to dig deep! In some countries the data is better than others - the USA is really good for this!

If you can find details of how many small prizes remain, how many big prizes remain, and how many of each there were to start with. **You can now use this to work out which games are more likely to give you a winner!**

Basically do this:-

1. divide the number of big prizes remaining by the number of big prizes at the start
2. divide the number of smaller prizes remaining by the number of smaller prizes at the start
3. divide the first one by the second

This will give you a number from 0 to 10. The higher this number the better! Take this into account with the other game details such as ticket price, size of jackpots etc and you can figure out the best scratchers to buy every time!

Or if you live in the USA, you can simply [subscribe to Dave's ScratchSmarter service](#) where he does all the work for you. He'll send you a report every week specifically for your State – for the insanely cheap price of just \$20 for a whole year!

If you're not in the US though you'll need to do some number crunching with a spreadsheet instead.

5. Wheeling

Wheeling lottery numbers is a way of covering a larger pool of numbers across multiple tickets.

Wheeling systems can be very complex, and give partial and full coverage of your chosen pool of numbers. They can even provide 'win guarantees'.

The **big problem** with wheeling systems though is how they have been mis-sold in the past.

Firstly 'win guarantees'. These normally go along the lines of "if you match x numbers in your set of y numbers you win blah". OK, but that's NOT so much a guarantee is it, when it contains the word 'IF'.

It is possible to create wheels with 'full' win guarantees. But it takes a lot of entries.

For example, I can show you how to 100% guarantee a 3 ball prize in a 6 from 49 lottery every time you play. But you will have to play **163 combinations** to do it.

Not quite the same thing is it?

Secondly, it's often carefully implied that wheeling increases your winning chances. And look at all the winners that have used our wheeling systems to prove it...

In reality of course MOST of the people who bought the system have never won! They just conveniently forget to

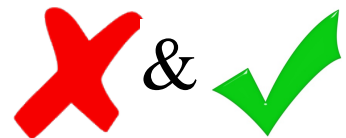

mention that bit ;-)

But don't get me wrong, wheeling is useful.

It's just not the 'miracle system' certain people sell it as to justify their crazy prices.

So if you're playing more than a few tickets, **DO** use it, just don't expect the miracles.

In short: it's about winning more small prizes, and the fact that some win guarantee definitely beats none at all!

Resources:

1. "Wheels with Guaranteed Wins", by Iliya Bluskov

This is **THE** definitive book on wheeling. It's written by a real Professor with numerous academic papers published on this specific topic. He is the world expert in this field.

[You can get his book on Amazon here.](#) Just don't let the cheesy book cover put you off. It's the quality of the wheels that count, and they are as good as it gets! (NOTE: [but get this version if you play games with 5 main balls,](#) such as EuroMillions or the US Powerball/MegaMillions)

2. "Win Lotto Systems", by Will Foster

If you prefer software for wheeling, then you may prefer this book and software combo by Prof. Will Foster.

The book is a good general guide on lottery strategy (which will actually help you!), and the software is basic but very simple to use wheeling software.

You can get Win Lotto Systems online [direct from the publisher here](#).

3. More Info Online

You can read more about wheeling [on our site here](#).

6. Pairs, Frequency, Skips, Oh My!

If you spend any time near a lottery forum you will see a lot of very enthusiastic people, talking an enormous amount of nonsense :-)

And by nonsense I mean applying some pretty advanced maths and statistical analysis. It all seems very plausible, because it sounds so complicated.

But it's still complete nonsense.

This kind of analysis depends on the lottery draw sticking to

some weird relationship between numbers. But folks, they're just ping pong balls bouncing around in a goldfish bowl.

The only reason there are numbers painted on them is so we can easily work out who wins.

It could be just colours, or flags of the world.

Applying all sorts of maths simply based on the relationship between numbers is plain silly, and will not help you win.

7. Short Term Patterns & Prediction

I see this one a lot. Fans of this idea absolutely agree that lotteries are definitely random. And then in the same breath state you can see short term patterns which can be useful in predicting numbers...

But surely, you can't have it both ways..?

This is a tricky one.

Because it's practically impossible to build a lottery machine that you can guarantee is **100% perfectly random**.

We're only human. And when we make things, there are always tiny flaws.

Most of the time those flaws do not stop the 'thing' we made from working perfectly. Your car can drive 10's of thousands of miles without a problem, yet it is different in

hundreds of microscopic ways to another car of the exact same model!

So how do they make a lottery machine that never, ever favours one ball just a tiny bit over another ball..?

In short, they don't.

They simply make a lottery machine that works well enough. Where predicting what comes out of it cannot be reliably done.

Then they rely on dozens of other factors that cannot be tracked let alone predicted like studio temperature, vibrations from traffic or machine wear to make things a bit more random.

And also replace the balls and machines whenever they feel like it without telling anyone. For even more randomness!

Aaargh. How does that help us??

It doesn't. Sorry. But we can't ignore the idea of 'prediction' completely.

What it does mean is that trying to predict a lottery using the entire history of the game is pointless.

Because everything has changed over that time.

But it is at least possible that the using the short term results could help give you an advantage.

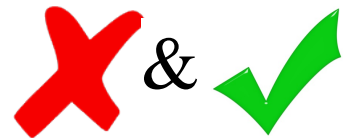

What I can't tell you though is that it definitely does.
Because it's pretty much impossible to prove either way!

So this gets a one of those yes and no votes. It may help,
but it may not.

And because of that I **don't** recommend you spend a lot of
time on it.

The tools in the Resources box below make this kind of
thing **quick and easy**, and are the best of their kind.

Just please remember that there's no
evidence these will really help you, so
consider them as primarily 'for fun'!

Resources:

1. Lottery Looper

This is a really nice visual tool for analysing lottery results,
and looking for patterns. There's no silly science, and as
long as you follow the examples in the manual you should
find it really easy to use too.

[You can find Lottery Looper online here](#)

2. Lotto Sorcerer

OK, this one is purely for those people who like lots of stats and analysis. If you want quick and easy, go with the two options above. Otherwise, if you really want the analysis stuff then this is a neat tool for doing it.

[You can find Lotto Sorcerer online here](#)

3. For 'Pick 3' Fans Only...

It's not my game of choice. But I know some of you love this game, so this is one for you guys.

Lotto 007 for Pick 3/4

This software works with all Pick 3 and Pick 4 games. It comes with all the charts and filters you can could ever want. There are 35 base filters plus 13 advanced ones, 13 statistical analysis methods and over 100 charts.

[You can find 'Lotto 007' online here](#)

8. More Tickets In Less Draws

This one takes a bit of complicated maths to prove.

So I won't bore you with that here :-)

But in short, if you normally play 10 combinations in every weekly draw. And instead switch to playing 20 lines every 2

weeks... you overall chances of winning are actually better..!

I know, I know. Boggles the mind slightly.

But I've done the maths to prove it.

The difference is very small.

But that small difference could be all the difference you need of course.

Just keep it sensible and fun though. It's not much fun saving up your entries for a whole year and then only getting to play once, right?

9. Lottery Sums & Deltas

Some people predict results will fall a certain way, based on the total of the numbers selected (sums). Or the differences between the numbers selected (deltas).

Here's the thinking why.

If you sum all the possible combinations there are, more of them fall into a certain range of values.

Here's why that doesn't matter one jot.

You don't win anything for matching the sum (or deltas) of the results!

You only win when you match the actual numbers drawn.

So it doesn't matter how many sums are the same.
Because it won't help you at all to match the
numbers themselves!

10. Lottery Syndicates

This is one of my specialities so I have to mention it here.
And because syndicates work very well.

There is a reason that a LOT of the jackpots you see
claimed are by GROUPS of people.

The UK Lotto states:-

“1 in 4 Lotto jackpots are won by a syndicate”

Why?

Because syndicates can afford to buy more tickets for each
draw.

And we know from earlier of course that buying more
tickets means a better chance. Remember, **50 tickets is
50 times the chance of winning!**

But with a syndicate you also get **people power**. Because
you share the cost of playing.

It still only costs you roughly the same to play, but now you
get 50 times the chance of hitting the jackpot.

You do of course have to share the winnings too – but honestly, have you ever heard a syndicate member complain about having to share a jackpot?!

Neither have I :-)

Resources:

1. Setting Up Your Own Syndicate

Syndicates are great for playing locally with groups of friends or family. But there are some things you need to watch out for. But read our [guide to running your own syndicate](#) and you'll have a much better chance of things working out well.

2. Online Lottery Syndicates

It's hard work running a syndicate. So if you want the benefits without the work, you can find lots of syndicates you can join online. [Start with our reviews here](#) if you want help in finding the best one for you.

3. How To Choose?

Not sure what kind of syndicate you want – read our guide [How To Choose a Lottery Syndicate](#).

11. Dreams, Angels & Psychics

I wouldn't criticise anyone's beliefs. But there is no real evidence that dreaming about lottery numbers has ever worked. Same for consulting with angels or psychics.

Yes, there's anecdotal evidence. But if there's a million people who all believe something works, **and** it only ends up working for 1 of them, I'm afraid that isn't the kind of evidence that helps us.

If you believe in those things then I wish you luck. You can at least be happy in the knowledge that it cannot hurt your chances.

But based on real world evidence, this doesn't help us win.

12. Avoiding Popular Numbers!

This is an interesting one. It won't improve your chances of winning, but it can make a huge difference when you win the jackpot.

People have a habit of picking numbers in certain ways. They use lucky numbers or make patterns on the playslip.

And it's incredibly common to find people using dates such as birthdays or anniversaries to pick their numbers.

REMEMBER: for most lottery games, everyone who picks

all the winning numbers SHARES the jackpot amount between them.

On a typical draw that could be just 1 or 2 people. But if you keep an eye on the numbers, you can often see the number of jackpot winners increase with certain patterns of results (e.g. all the numbers below 31, i.e. days of the month!).

Worst case this can turn a glass of jackpot champagne into a very sobering experience indeed. Splitting a modest jackpot with 100's of other winners isn't quite as much fun. **This does happen.**

So it is worth trying to avoid picking popular numbers.

This can be a struggle sometimes as humans aren't very good at being random (just ask Derren Brown!).

If you avoid lucky numbers, limit date numbers and don't use a playslip to choose – then you'll be doing a much better job than most people. And it could mean the difference between a buying a new car and being rich for life!

Resources:

1. Struggling To Pick Numbers?

If you want a quick and easy way to pick some random numbers – use our [Lottery Number Generator here](#).

It's free, and will help avoid you avoid those popular numbers simply by being more random than humans.

Thanks For Reading

This book has been kept short for quick and easy reading. The long discussions, research and explanations have been left out. Mainly because you don't want to waste time reading them, you just want to know what works and what doesn't!

So finally it just remains to say "Good luck in the next draw" :-)

Where To Next..?
